Gentlemen:

Subject: Inspection 50-245/85-19; 50-336/85-25 (6/30/85 - 7/22/85)

This routine safety inspection was of operational and supporting activities at Millstone Units 1 and 2. Particular attention was directed to events surrounding a loss of pressure scram at Millstone Unit 2.

No violations of NRC requirements were identified and no reply to this letter is required.

Your letter of June 18, 1985 concerning Steam Generator tube plugging and sleeving at Millstone Unit 2 has been received and reviewed. Additional NRC follow-up of steam generator conditions and performance will occur during routine inspections, but we have no questions at this time.

Your cooperation with us is appreciated.
