

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

October 28, 1985

Docket Nos.: 50-424/425

APPLICANT: Georgia Power Company

FACILITY: Vogtle, Units 1 and 2

SUBJECT: SUMMARY OF MEETING HELD OCTOBER 21, 1985, ON TECHNICAL
SPECIFICATIONS

On October 21, 1985, the staff met with the applicant to discuss Technical Specifications (TS) for Vogtle Unit 1. Participants are listed in the enclosure.

The staff discussed the Vogtle Unit 1 TS review schedule with the applicant. The staff expects to transmit the Vogtle TS to the applicant by October 28, 1985*. The applicant should then mark the TS with all Vogtle-specific information and return the original plus 4 copies to the staff by February 28, 1986. Also at that time, any deviations from the standard TS should be justified and the appropriate FSAR section referenced. This will greatly aid the staff and its consultants in reviewing the justifications and is aimed to reduce the number of questions which would need to be resolved between the staff and applicant. After the staff and consultant have reviewed the submittal, a series of meetings will be initiated to resolve questions.

The staff cautioned the applicant to ensure that the TS submittal coincides with the FSAR and the staff's SER. The staff also stated that if the applicant's fuel load date changed, the TS review schedule will automatically change appropriately. The staff explained that substantive questions, i.e. excluding typos, should be answered in writing by the applicant. Additionally, all correspondence following the proof and review stage will be formalized.

The staff suggested that the applicant carefully review diesel generator maintenance and surveillance requirements to be assured that they are in line with manufacturer recommendations as well as TDI Owners Group and staff recommendations. The staff also cautioned the applicant to make sure that plant-specific values are at least as conservative as those values used in the FSAR safety analyses.

The staff and applicant also discussed the new TS program being promoted by the Atomic Industrial Forum pertaining to streamlining of the TS. The staff inquired as to whether the applicant would take advantage of such a program. The applicant indicated that it would be wary of potential licensing delays introduced by participation but would follow the progress being made by Seabrook in this area.
