Mr. Edward J. Butcher, Acting Chief
Operating Reactors Branch #3
Division of Licensing
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, DC 20555

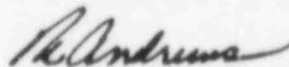

Reference: Docket No. 50-285

Dear Mr. Butcher:

Generic Letter 84-15
Diesel Generator Reliability

The Omaha Public Power District responded to the subject Generic Letter in correspondence dated December 28, 1984. In that response, OPPD stated that testing requirements as specified in the Fort Calhoun Station Technical Specifications would be reviewed. If deemed excessive, or counter to reliability considerations, an Application for Amendment would be prepared. OPPD has reviewed the existing Technical Specifications and does intend to prepare an Application for Amendment. Our schedule for doing so is tentatively set for one month after returning to full power operation from the current re-fueling outage. This schedule was discussed with our NRC Project Manager in a telephone conversation on October 8, 1985. This letter serves to formalize that conversation. If you have questions concerning this matter, please contact us.

Sincerely,

R. L. Andrews
Division Manager
Nuclear Production
