MEMORANDUM FOR: Chairman, Systematic Assessment of Licensee Performance (SALP)
Review Group, IE

FROM: James P. O'Reilly, Director, RII

SUBJECT: SALP BOARD RESULTS FOR GEORGIA POWER COMPANY

The results of the regional evaluations and the action plans for the region are documented in the Enclosures to this memorandum. During the development of the SALP evaluations for each Georgia Power Company (GPC) site, it was determined that an evaluation of GPC's overall performance in its nuclear operations would be beneficial to the NRC and the utility. A format for the utility evaluation was developed, and is forwarded as Enclosure 1 to this memorandum. Enclosures 2 and 3 document the results of the SALP evaluation for Hatch 1 and 2 and Vogtle 1 and 2. Items identified in the evaluations for regional action have been added to the Outstanding Items List for each facility.

Region II conducted a management meeting with GPC during which the collective results of these evaluations were presented. This method of presentation to senior corporate executives is considered very desirable in that it provides the decision makers of each utility with the NRC's evaluation of its overall performance in nuclear activities. This, of course, includes identification of both weak and strong areas. The management meeting was held at the GPC Corporate office in Atlanta, GA on October 20, 1980.
