John D. Kinneman, Chief
Nuclear Materials Safety Section A
Division of Radiation Safety
and Safeguards

Dear Mr. Kinneman,

This is in response to your letter of September 19, 1985 concerning the routine safety inspection conducted by Ms. Nancy Dennis of your office on August 20, 1985.

As per our discussion with Ms. Dennis at the conclusion of her inspection, we have requested an amendment to our Materials License adding Mr. Cory of our staff to the license as an authorized user of licensed materials.

Concerning the Notice of Violation contained in Appendix A of your letter:

- A. Condition 14. A. (2) of our license states that periodic leak testing is not required for sealed sources stored and not in use. Our business is a seasonal one and we do not use our nuclear moisture-density guages on all projects. It is not uncommon for our guages to be stored unused for time periods exceeding six months.

Our Troxler Guage S/N 7622 was serviced and leak tested in February of 1984 and has been in storage unused since that time. S/N 7622 was leak tested on September 21, 1985. Test results indicate no leakage.

Our files show that Troxler Guage S/N 7011 was leak tested twice during 1982 and once in 1983. The test results for 1982 and 1983 had been misfiled and therefore were not seen by Ms. Dennis during her inspection. S/N 7011 was leak tested on September 21, 1985. Test results indicate no leakage.

- B. We have initiated an inventory system as specified in Condition 15 of our Materials License. An inventory of all sealed sources was conducted on September 23, 1985. The record of this inventory and all subsequent inventories will be kept on file.
- C. Copies of NRC form 3 and notices describing our license, it's conditions, parts 19 and 20 of 10 CFR Chapter 1, and where they may be examined have been posted at several locations in and around our materials storage area. Also posted is Appendix A, Notice of Violation as required in 10 CFR 19.11(a) and (e).

In addition to the corrective measures mentioned above, and in order to assure full compliance, we have instructed all personnel associated with licensed activities to review and familiarize themselves with our license and pertinent NRC rules and regulations.

Having implemented the corrective measures and policy changes stated above, we feel that we are now, and will continue to be, in full compliance with the conditions of our Materials License.

Sincerely,

Jeffrey G. Sweigart, President
McMinn's Asphalt Co., Inc.
