RE: def call to Scott Markwell of SafeNight

questions:

- Q1. recommend lic # on all labels instead of "SafeNight"
- Q2. 9/26/95 letter does not include modified LTPD 5% table. assume you are using the ones you submitted in your 7/12/95 letter. correct?
- Q3. what ensures that the screw is not long enough to dislodge the source holder from the plastic cup when the ion chamber is screwed onto the circuit board?

response:

- A1. they will have lic# on all labels
- A2. he will send a statement confirming
- A3. he will check with Homewatch:
possibilities:
 - a border between the screw and the button
 - the screw is shorter than the hole depth, and they do some of QC check on the screws to ensure that

he will send a fax when he gets the information.
