Steve, According to Scott. M.:

- o Prototype testing in April; their progress hindered by chip board design changes to accomodate radio the transmitter.

- o Have been negotiating to contract SCI Systems for manufacturing; anticipated contract signing in April and obtaining QC procedures shortly after.

- o Informed him of our internal procedure to void then reactivate application review.

- o Based on my judgement, they seem to be pretty close to resolving the questions raised in the def. letter; I recommend not to send him a letter regarding plausible action to void their application. Dave
