

UNITED STATES  
NUCLEAR REGULATORY COMMISSION

WASHINGTON, D.C. 20555-0001

September 20, 1996

DOCKET: 70-1113

LICENSEE: General Electric Company  
Wilmington, North Carolina

SUBJECT: SAFETY EVALUATION REPORT: AMENDMENT DATED JULY 31, 1996, REVISED  
RADIOLOGICAL CONTINGENCY AND EMERGENCY PLAN

BACKGROUND

By application dated July 31, 1996, the General Electric Company (GE), Wilmington, North Carolina, requested an amendment to License SNM-1097 to authorize minor revisions to the Radiological Contingency and Emergency Plan (RC&EP).

DISCUSSION

The Region II and NMSS staff have reviewed the revision to the RC&EP and agree with the licensee that the changes do not decrease the effectiveness of the RC&EP. The revisions are minor and include: (1) changing telephone numbers, (2) revising site maps, (3) adding clarifying word changes, (4) updating the list of procedures in Appendix C, (5) revising the organizational charts and descriptions, etc.

ENVIRONMENTAL REVIEW

The staff has reviewed the revised RC&EP and has determined that the changes are administrative and procedural in nature and do not adversely affect public health and safety or the environment. Accordingly, the staff has determined that the criteria in 10 CFR 51.22(c)(11) for categorically excluding an action from an environmental review has been met. Therefore, neither an environmental assessment nor an environmental impact statement is necessary for this proposed action.

CONCLUSION

The staff has reviewed the proposed changes and determined that they are acceptable and will have no adverse effect on public health and safety or the environment and do not decrease the response effectiveness of the RC&EP. This amendment is issued for the convenience of the Commission to maintain up-to-date references to the RC&EP.

The Region II Principal Inspector has no objection to this proposed action.
