Subject: Arkansas Nuclear One - Unit 2  
Docket No. 50-368  
License No. NPF-6  
Withdrawal Of Technical Specifications Amendment Requests  
(TAC Nos. M92426 and M93385)

Gentlemen:

Entergy Operations is withdrawing two previously submitted technical specifications (TS) amendment requests related to the inservice inspection (ISI) of steam generator (SG) tubes at Arkansas Nuclear One, Unit 2 (ANO-2). The first request, submitted on May 19, 1995 (2CAN059508), would have established special interest groups within the SG tubes for ISI inspections. The second request, which would have established a repair limit for circumferential cracks, was submitted on September 25, 1995 (2CAN099503).

In the future, it is anticipated that an ANO-2 TS amendment request to establish an alternate repair criteria for circumferential cracks at explosive transitions will be made as a lead plant submittal for the industry effort led by the Electric Power Research Institute.

Since Entergy Operations is withdrawing these amendment requests, responses to the related NRC requests for additional information (2CNA099505, dated September 26, 1995, and 2CNA019605, dated January 31, 1995) will not be made. Should you have any questions concerning this submittal, please contact me.
