## Re: Operating Procedure for Mobile Filtration/IX System

Dear Mr. Slawinski:

In response to the request of Mr. John House, attached is a copy of the revised Diversified Technologies Services, Inc. (DTS) procedure for the Advanced Medical Systems, Inc. (AMS) water treatment project. While the protocol still implements a system of multi-stage filtration and pressure vessels for application of ion exchange/activated carbon process media described in our letter dated March 2, 1995, a membrane separation unit has been added for end-stage filtration. A trial run using this series of filters resulted in successful treatment of the basement water to below the release criteria with a single pass-through. Therefore, we have implemented routine processing by this methodology. If you have any questions on this procedure, please contact me at (216) 692-3270.

Sincerely,

Robert Meschter, RSO
