Haddam Neck Plant
Closeout of Commitment For GL 96-01 Overlap Testing

The purpose of this letter is for the Connecticut Yankee Atomic Power Company (CYAPCO), to complete its response for the Haddam Neck Plant (HNP) to Nuclear Regulatory Commission (NRC) Generic Letter (GL) 96-01, "Testing of Safety-Related Logic Circuits."¹ CYAPCO responded to the NRC GL 96-01 in a letter dated April 16, 1996² and provided the necessary information with commitments to complete the requested actions.

In a letter dated December 5, 1996³ CYAPCO certified that the Haddam Neck Plant is permanently defueled. This eliminates the need for the systems stipulated in GL 96-01 for accident mitigation such as, the reactor protection system, emergency diesel generator load shedding and sequencing, and the engineered safety features actuation logic.

Therefore commitment number B15639-1, from CYAPCO's April 16, 1996 response, will not be implemented at the Haddam Neck Plant. Plant defueling and subsequent decommissioning eliminates the need for overlap testing of instrumentation systems associated with plant operating systems. This commitment is considered closed.

¹ D. M. Crutchfield letter to all holders of operating licenses or construction permits for nuclear power reactors, "NRC Generic Letter No. 96-01: Testing of Safety Related Logic Circuits," dated January 10, 1996.

² F. R. Dacimo letter to the NRC "Testing of Safety-Related Logic Circuits" dated April 16, 1996.

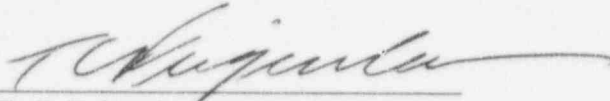

³ T. C. Feigenbaum letter to the NRC "Certification of Permanent Cessation of Power Operation And That Fuel Has Been Permanently Removed From The Reactor" dated December 5, 1996.
