Dear Mr. Rodriguez:

SUBJECT: RANCHO SECO NUCLEAR GENERATING STATION - GENERIC LETTER 83-28 ITEMS  
3.2.1 AND 3.2.2 POST-MAINTENANCE TESTING OF SAFETY - RELATED SYSTEM  
COMPONENTS OTHER THAN THOSE OF THE REACTOR TRIP SYSTEM

We have completed our review of the information you provided on post maintenance testing of safety related system components other than those of the reactor trip system. From our review we have concluded that:

- (a) On the basis of the provisions of your administrative procedure, AP.3, and the results of your review of the maintenance and surveillance procedures applicable to the reactor trip system, that post-maintenance operability is required of all safety-related equipment and such testing demonstrates the equipment is capable of performing its safety function.
- (b) On the basis of the results of your review of the maintenance and surveillance procedures for the reactor trip system; your existing programs for engineering review of such procedures on a periodic basis, and review of vendor information when received; and your commitment to add a specific item to the procedure review checklist addressing post-maintenance testing, you have a continuing program for assuring that appropriate test guidance is contained in facility maintenance and test procedures.

Accordingly we conclude that your program and action meet the requirements of items 3.2.1 and 3.2.2 of Generic Letter 83-28. Therefore these items are complete for Rancho Seco.

Our Safety Evaluation (SE) is enclosed for your information.

Sincerely,

"ORIGINAL SIGNED BY  
JOHN F. STOLZ"

John F. Stolz, Chief  
Operating Reactors Branch #4  
Division of Licensing
