Harold Denton, Director
Office of Nuclear Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Attn: DL/SSPB

Reference: Docket 50-59, License R-23

Dear Sir:

Recent modifications to the AGN-201 reactor facility have necessitated minor revisions to the physical security plan applicable to this facility. These revisions, which do not decrease the effectiveness of the plan, were submitted to the U.S. N.R.C. for review and have been found acceptable as per conversation with Mr. Don Carlson of NMSS. Since the Security Plan is directly referenced in Amendment 12 to license R-23, Texas A&M requests that subject license be amended to reflect changes in the original security plan.

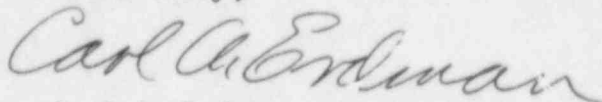

Specifically, amendment 12 to license R-23 states:
...provisions of the NRC approved physical security plan ...dated September 13, 1974.

This should be revised to read:
...provisions of the NRC approved physical security plan ...dated September 13, 1974 as amended September 24, 1984.

An earlier version of this letter request, dated 18 July 85, was sent to Cecil Thomas. As per instructions from Hal Bernard of the NRC we are sending this revised notarized version.

Thank you for your prompt consideration of this request.

Yours truly,

Carl A. Erdman
Professor and Head
