NRC Project No. 691

November 20, 1996

US Nuclear Regulatory Commission

Attn: Document Control Desk

Washington DC 20555

Subject: **Transmittal of Errata to BWR Owners' Group Licensing Topical Report, "Reactor Stability Long-Term Solution: Enhanced Option I-A Generic Technical Specifications," NEDO-32339, Supplement 4, October 1995.**

Enclosed for NRC information is errata dated 11/18/96 to NEDO-32339, Supplement 4, "Enhanced Option I-A Generic Technical Specifications." The changes were presented and discussed with the NRC at a meeting with the BWROG Enhanced Option I-A (E1A) Committee on October 16, 1996. The changes are all minor in scope and were developed to provide consistent E1A terminology, to be consistent with the Improved Standard Technical Specifications, or to provide clarifications which facilitate plant implementation.

The discussion with the NRC at the October 16 meeting concluded that the changes in the 11/18/96 errata do not affect the safety evaluation completed by the NRC on NEDO-32339, Supplement 4, issued on September 20, 1996. Therefore, formal review of this submittal is not required, and these changes will be included in the approved version of Supplement 4.

The 11/18/96 errata is indicated by bold text, strikethrough of deletions, and sidebar markings. Strikethroughs are already utilized in the sample E1A Technical Specification and Bases, Appendices A and B, respectively, to indicate changes from Standard Technical Specifications. Additional strikethroughs associated with the 11/18/96 errata are identified by sidebar markings.
