

Note to File: CPAD Technologies Inc.

This documents the telephone Call of 10/9/96 with Al McEachern.

CPAD (Al McEachern) informed me of a new distributor:

Galson Corporation
6601 Kirkville Road
East Syracuse, NY 13057

I requested that Al clarify how the IMS Detector works as a component in the overall device with respect to detecting explosives. He said that the detector is used only for detecting explosives and that when the overall device detects narcotics, a separate detector is used - one that does not contain radioactive material. [This is in line with OGC's response to my questions.]

In addition, I discussed the deficiencies identified by John Lubinski and myself that will be contained in the next deficiency letter that will be sent to CPAD.

Brian Smith - 10/10/96
