Subject: Arkansas Nuclear One - Unit 2
Docket No. 50-368
License No. NPF-6
Fuel Enrichment Increase Technical Specification
Change Request Correction

Gentlemen:

By letter dated August 23, 1996 (2CAN089605), Entergy Operations requested a change to the Arkansas Nuclear One, Unit 2 Technical Specifications to allow fuel enrichments up to 5.0 weight percent Uranium-235. In a telephone conversation on November 14, 1996, the Staff requested a clarification of information contained in section 3.1 of the criticality analysis. In the third paragraph under "Boraflex configuration", item 3) states that 65% of panels have gaps and 45% have end shrinkage. The 45% is a typographical error and should have been 35%. The results of the criticality analysis are not affected by this correction.

The conclusions of the no significant hazards consideration of the August 23, 1996, submittal remain unchanged by this information. Should you have any further questions, please contact me.

Very truly yours,

Dwight C. Mims
Director, Nuclear Safety
