RE: Film Badge Reading

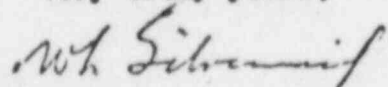

The Atomic Energy Commission requires that you be notified whenever your film badge shows over 1250 millirem of radiation in a quarter of a year. For part of the third quarter of 1970, your badge showed a reading of 1400 millirem.

The following wording is required by law:

"This report is furnished to you under the provisions of the Atomic Energy Commission Regulations entitled 'Standards for Protection Against Radiation' (10 CFR 20)

You should preserve this report for future reference."

Very truly yours,

W. L. Silvermail
Radiation Officer

REF: Docket 40-2061

Dear Sir:

In conformance with 10 CFR 20.405, we hereby report a film badge overexposure of one of our employees during the 3rd quarter of 1970.

This employee is a towmotor operator employed in our Shipping and Receiving Department. We believe the apparent exposure resulted from improper storage of the badge during off-duty hours. This was a new employee who, although given instructions with respect to proper wearing of the badge, evidently was unaware of the possibility of inadvertent exposure of the badge if not stored in the badge rack. It is significant that three other towmotor operators doing essentially the same type of work showed no overexposure during this period.

The employee in question nevertheless was transferred to a different operation for the remainder of the quarter, and both he and his foreman were re-instructed with respect to proper film badge usage and storage.

Sincerely yours,

W. L. Silvernail
