Attention: Regional Administrator, Region II

Subject: Reply to Notice of Violation
Docket No. 030-34082
License No. 45-25355-01

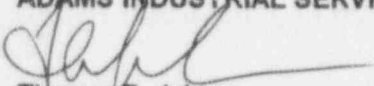

Adams Industrial Services Inc. (**AIS**) would like to take this opportunity to reply to the Notice of Violation resulting from an inspection performed on August 29, 1996. The following responses reference the violations in sequence, as presented in the Notice of Violation.

- A. **AIS** was not aware of the requirement for separate licensing and wrongly assumed that all licensing requirements and materials would be contained in the package requested at the time of our application request. Upon being informed of these additional requirements, **AIS** submitted a Quality Assurance plan and registered as a Type B container user as required. Further violations will be prevented by maintaining the current registration and Quality Assurance plans. Full compliance has been achieved and copies of the approvals and registrations are attached.
- B. The exposure device had not been labeled as notified. This exposure device was not labeled at the time of its receipt and was inadvertently not labeled subsequently. Upon notification by the USNRC inspector the exposure device was labeled with the required information. The device will be inspected periodically, as required by our license terms, and verified that this information remains legible. Full compliance has been achieved.
- C. The storage area is surveyed prior to every entry by **AIS** personnel. However, the proper document had not been completed as required by our license terms. This requirement was reviewed with radiographic personnel and emphasized the importance of maintaining all the records required by our materials license. The RPO quarterly and periodic reviews will include a verification that these requirements are met. Full compliance has been achieved.

Should you have any questions or additional requirements please contact me.

Sincerely,

ADAMS INDUSTRIAL SERVICES, INC.

Thomas D. Adams
Radiation Protection Officer
President
