Currently, state and Federally issued radioactive materials licenses define a sealed radiation source as leaking if removable contamination is found to be equal to or greater than 0.005 microcuries.

This is to certify that the following listed and described items have been tested according to American National Standards Institute N5.10-1968 Appendix B Section B2.1, Wipe (Smear) Test. The level(s) of removable contamination observed on the surface of the sources are listed as follows:

Source Reference Date :
