The purpose of the meeting was to explore the possibility of AECL requesting the staff to assess the licensability of its SLOWPOKE-2 research reactor in the United States. AECL described the reactor, its features, history, operating experience and present status. The likely scope and focus of a licensability study was discussed. The meeting provided for a very useful exchange of information.

Both AECL and the staff agreed to explore several identified issues with their respective management and to communicate again in about one month.
