Mr. Harold R. Denton, Director  
Office of Nuclear Reactor Regulation  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Attention: Ms. E.G. Adensam, Chief  
Licensing Branch No. 4

Subject: McGuire Nuclear Station  
Docket Nos. 50-369 and 50-370  
Technical Specification Amendment Relative to  
the Number of Reactor Coolant Pumps in  
Operation when in Mode 3

Dear Mr. Denton:

Attached are proposed license amendments for McGuire Nuclear Station Facility  
Operating Licenses NPF-9 (Unit 1) and NPF-17 (Unit 2).

The proposed changes to the Technical Specifications seek to:

1. Correct an inconsistency between the McGuire Nuclear Station  
accident analysis in the FSAR and McGuire's Technical Specification  
3.4.1.2 and Bases 3/4.4.1 regarding the number of operating reactor  
coolant pumps when in hot standby; and
2. Ensure that in the event of any limiting accident at zero power  
the design basis will be met.

Attachment I contains the proposed Technical Specification changes. Attachment  
II provides a Technical Justification and Safety Analysis in support of the  
proposed changes. Attachment III provides an analysis conforming to the standards  
contained in 10 CFR 50.92 as required by 10 CFR 50.91. This analysis concludes  
that the proposed amendments would not have an adverse safety or environmental  
impact.

This request involves one application for amendment to the McGuire's Technical  
Specifications. Accordingly, pursuant to 10 CFR 170.21, a check for \$150.00 is  
enclosed.

Please feel free to contact us if you require any additional information.

Very truly yours,

  
Hal B. Tucker
