Containment Tubing and Instrument Support System
Letter GN-717, dated October 9, 1985

Attention: J. Nelson Grace

In previous correspondence of this subject, Georgia Power Company indicated that an interim report would be submitted on or before November 15, 1985 that would forecast a completion date for this evaluation.

At this time, a field walkdown has been completed. The walkdown identified that there were forty-nine (49) instrument supports in the containment building and one (1) support in the fuel handling building attached to structural steel members. A detailed review is being performed for the fifty instruments to determine if their seismic qualification levels could have been exceeded. Additionally, a preliminary review has indicated that the instrumentation tubing and tubing supports have been properly designed. At this time, Georgia Power Company expects to inform the NRC of the results of the evaluation of this condition by January 24, 1986.

This response contains no proprietary information and may be placed in the NRC Public Document Room.

Yours truly,

D. O. Foster
