

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

December 3, 1981

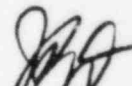

NOTE TO: R. E. Cunningham
FROM: John G. Davis
SUBJECT: GENERAL LICENSE STUDY

I would like a ¹ detailed briefing on the work underway concerning expanding the GL concept--particularly in the area of medical licensing. In this briefing I would like a ² schedule with milestones and products identified.

During this briefing, please emphasize how the Sandia Study and the GL study interrelate, particularly:

1. ³ Are both the GL study and Sandia Study, in combination, compatible with decentralization?
2. ⁴ If the GL study reduces incoming applications, will the system being conceptualized under the Sandia Study be effective? ⁵ Is there a breakpoint on the Sandia approach for number of applications where the system would not be effective?

I will appreciate the briefing the week of 12/14/81.

John G. Davis
