Gentlemen:

Over the past few weeks the staff of the Uranium Recovery Field Office, USNRC has been reviewing the Source Material Licenses issued by this office in an effort to assure that the licenses are current. We are utilizing a computer-based word processing system which enables us to incorporate into one document the original license and any subsequent amendments to the license. This system will allow us to automatically incorporate future amendments and reissue the license in its entirety with each new amendment.

Therefore, pursuant to Title 10, Code of Federal Regulations, Part 40, the Uranium Recovery Field Office is, at this time, reissuing in its entirety Source Material License SUA-1441 for the Crow Butte in situ leach facility. Editorial changes were made in License Condition Nos. 4, 9, 10, 12-23, 28-30, 33, 35, 36, 38, 40, 42 and 43 which should improve clarity without altering the intent of the conditions.

License Condition No. 20 was modified to require submittal of the requested construction report within thirty (30) days of completion of pond construction. The condition now reads as follows:

20. Within thirty (30) days of completing construction of the evaporation ponds, the licensee shall submit a construction report which details the methods, controls, quality assurance tests, and the testing methods which were utilized for the construction of the ponds. The report shall identify the location of field tests which were made during construction and

include as-built drawings which detail the construction of the pond components.

No new conditions were added and no conditions were deleted. Please feel free to contact Ms. Candice C. Jierree at (303) 236-2817, the project manager for SUA-1441, if you have any questions regarding this matter.
