Dan A. Nauman
Vice President
Nuclear Operations

December 4, 1985

Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, DC 20555

Subject: Virgil C. Summer Nuclear Station
Docket No. 50/395
Operating License No. NPF-12
Generic Letter 83-28
Additional Information

Dear Mr. Denton:

In letters dated November 4, 1983, February 29, 1984, April 30, 1984 and September 28, 1984 South Carolina Electric and Gas Company (SCE&G) responded to Generic Letter 83-28, "Required Actions Based on Generic Implications of Salem ATWS Events." On November 11, 1985, SCE&G received a letter from your Staff including the Safety Evaluation for items 3.1.1, 3.1.2, 3.2.1, 4.1 and 4.5.1 and a request for additional information on item 3.2.2. This letter is being provided in response to that request.

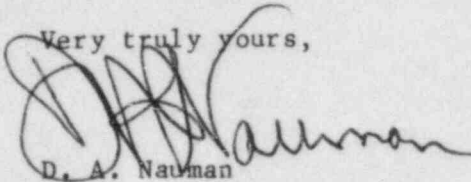

As described specifically in the September 28, 1984 submittal, SCE&G has instituted procedures and programs to review vendor and other technical information. These programs help to ensure that information pertaining to the safety related equipment at the Virgil C. Summer Nuclear Station is reviewed for applicability and that any resulting necessary changes in plant operation or procedures are initiated. Many of the programs were initiated during the construction and early operational stages of the plant and have therefore been in existence for several years prior to the issuance of Generic Letter 83-28. Other programs, such as the one which reviews vendor supplied information on a formal basis, have been proceduralized as a result of the Salem incident. In the case of the vendor information program, a portion of the program has entailed a review of Westinghouse supplied Technical Bulletins issued since 1973 on both safety and non-safety related equipment. These reviews and their results have been documented in accordance with the established program procedures. Therefore, with the existence of these programs, SCE&G is confident that appropriate vendor and industry supplied information on safety related equipment at the Virgil C. Summer Nuclear Station has been reviewed and that corrective measures, if necessary, have and will continue to be identified and rectified.
