Gentlemen:

Enclosed is Amendment No. 02 renewing your NRC License No. 24-12127-03 in accordance with your request.

Please note that a condition has been added to your license addressing safety procedures for handling radioactive material. This condition was added to cover these procedures which were not addressed by you in previously submitted documents. This condition may be modified or deleted if you provide alternative equivalent procedures.

Please note that the method of disposal of contaminated solid waste described in Item 2 of your letter dated January 19, 1981 is not in accordance with the regulations of Section 20.301 through Section 20.306 of 10 CFR Part 20. Therefore, as you will notice in License Condition No. 18., these procedures have not been included as approved procedures. You must establish contaminated solid waste disposal methods which conform to the regulations. You need not submit your disposal procedures if they conform to the regulations.

For information and clarification regarding the disposal of liquid scintillation media you will find enclosed with this letter a notice dated October 28, 1981, to medical, academic and industrial research licensees.

Please review the enclosed document carefully and be sure that you understand all conditions. You must conduct your program involving radioactive materials in accordance with the conditions of your NRC license, representations made in your license application, and NRC regulations. In particular, note that you must:

1. Operate in accordance with NRC regulations 10 CFR Part 19, "Notices, Instructions and Reports to Workers; Inspections," 10 CFR Part 20, "Standards for Protection Against Radiation," and other applicable regulations.
2. Possess radioactive material only in the quantity and form indicated in your license.
3. Use radioactive material only for the purpose(s) indicated in your license.

8512090459 850709
REG3 LIC30
24-12127-03 PDR

4. Notify NRC in writing of any change in mailing address.
5. Request and obtain appropriate amendment if you plan to change ownership of your organization, change locations of radioactive material, or make any other changes in your facility or program which are contrary to your license conditions or representations made in your license application and any supplemental correspondence with NRC. Any amendment request should be accompanied by the appropriate fee specified in 10 CFR Part 170.
6. Submit a complete renewal application with proper fee or termination request at least 30 days before the expiration date on your license. You will receive a reminder notice approximately 90 days before the expiration date. Possession of radioactive material after your license expires is a violation of NRC regulations.
7. Request termination of your license if you plan to permanently discontinue activities involving radioactive material prior to your expiration date.

You will be periodically inspected by NRC. Failure to conduct your program in accordance with NRC regulations, license conditions and representations in your license application will result in enforcement action against you in accordance with the General Policy and Procedures for NRC Enforcement Actions, 10 CFR Part 2, Appendix C.

If you have any questions or require clarification of any of the above stated information, contact us at (312) 790-5625.

Sincerely,

Original Signed By
Evelyn R. Matson
Materials Licensing Section
