Re: Robert Cooper on-the-job- training, use of licensed material

Dear Ms. Holt:

Robert Cooper has been working under my direct supervision for the last three months for his on-the-job well logging training. Under my direction as the individual responsible under materials license #21-24496-01, R. Cooper trained from July through October in the proper operation and safety procedures for logging. Bob has a very comprehensive understanding of radiation safety techniques and technologies. He is very conscientious and would demand strict compliance with the rules.

In October, 1985, Robert Cooper completed the Gulf Nuclear, Inc. 24-hour radiation safety school for well loggers. I feel Robert Cooper is well trained and qualified to serve as a radiation protection officer.

Sincerely,

Donald F. Smith  
Exploration Engineer
