Introduction

On November 26, 1985, Department of Energy (DOE) met with the NRC staff to discuss two summaries of structural evaluations of the Model No. MH-1A cask.

Discussion

DOE showed the NRC staff summaries of structural evaluations of the Model No. MH-1A cask performed by SANDIA Laboratories and Westinghouse-Hanford. Both evaluations appeared to confirm the NRC staff position that the package seal would be lost following the accident condition of transport tests.

DOE plans to pursue the analysis with Westinghouse-Hanford. The contents of the fuel material will be taken into account including a limited amount of crude on the outside of the fuel plates and rods. The NRC staff expects a reasonable amount of success in DOE obtaining a NRC certificate for the cask.
