Salt Lake City, Utah 84113

Dear Mr. Dalley:

Re: NL:IB:WOM (GL-241)

I have your memo addressed to Monsanto dated March 29, 1966, a photocopy of which is attached for your ready reference. In answer to your questions we do not, and do not plan to handle any isotope material under our License GL-241 in the State of Utah.

In the application for this license we indicated that this is for installation, amintenance and servicing of fire detection devices containing Americium 241 in our Research Center and Corporate Headquarters location in Creve Coeur, Missouri only. Such is our present, and so far as I know, future intent.

Sincerely yours,

L. C. Weger
Safety Manager
