AUG 4 1966

Department of the Army  
Office of the Surgeon General  
Washington, D. C. 20315

Attention: Lt. Col. William E. Pressing, MC

Gentlemen:

Enclosed is Amendment No. 6 to License No. 5-46-13 held by Fitzsimons General Hospital.

Please note that Iodine 131 in P-Toluidine Polyvinylpyrrolidone and Selenium 75 have not been included in the license. We consider them to be in the clinical investigative stage since the safety and efficacy of these materials for the uses requested in the application have not been sufficiently established for routine clinical use. If the hospital wishes to use these materials, we would be pleased to consider an application supported by research protocols prepared in accordance with the criteria outlined in our Medical Licensing Guide.

With respect to the materials previously authorized in Amendment No. 1 to License 5-46-13 for nutrition and metabolism studies, we need a report of the studies performed to date and a plan for future studies. The report and protocol for future work will be reviewed with the assistance of our Medical Advisory Committee.

Sincerely yours,

cc: Compliance Region I  
Standard Branch Dist.
