Department of the Army
Fitzsimons General Hospital
and U. S. Army Hospital
Research and Nutrition
Laboratory
Denver, Colorado 80241

Gentlemen:

Enclosed is Amendment No. 14 to License No. 5-46-13.

Please note that this amendment does not authorize the use of technetium 99m for cardiac scans, placenta localization and vascular studies. The only authorized use of technetium 99m is brain scanning. Any other use of technetium 99m is considered investigational and requests for such use must be accompanied by a research protocol which is outlined in Appendix F of our medical licensing guide. We have not included iodinated human serum albumin for intrathecal injection for diagnosis of cerebrospinal rhinorrhea, obstructive hydrocephalus and blocked shunts. These uses are also considered investigational and must be accompanied by a research protocol.

If the hospital desires to carry out these studies, we shall be pleased to continue our review with the assistance of our Medical Advisory Committee upon receipt of the protocols.

Sincerely yours,

bcc: St. Br. Dist.
CO, Region IV
