SUMMARY OF OPERATING EXPERIENCE

NOVEMBER 1985

Indian Point Unit 3 was synchronized to the bus for a total of 695.49 hours producing a gross generation of 679,630 MWe for this reporting period.

On November 29th at 0817 hours a maintenance worker who was working above the MBFP turbine inadvertently stepped on the turbine manual trip lever. This caused the MBFP to trip which initiated a unit trip on lo level in #34 Steam Generator.

On November 30th at 0318 hours during a plant startup the Control Room Operator was unable to maintain proper Steam Generator level resulting in a hi-hi level condition in #32 Steam Generator.

The unit was returned to service on November 30th at 0925 hours and continued to operate for the remainder of the reporting period.
