Re: Amendment to License #48-06239-01

Gentlemen:

We request amendment to our byproduct material license # 48-06239-01 to make the following changes:

1. Please add Robert Boex, M.D. as a physician user on our license for all materials authorized by his preceptor and training records. For these records, please refer to the license file for Trinity Memorial Hospital, Cudahy, Wisconsin, license #48-08325-01.
2. We also request amendment concerning the Gd-153 and I-125 sources for bone mineral analyzer devices (Items H and I on our license). In addition to Gulf Nuclear and AECL as suppliers, we request authorization to receive these sources from other manufacturers such as New England Nuclear and Amersham as they become approved by the NRC.

Also, because the manufacturers indicate the activity of the sources may be as much as 25% higher than the stated activity when they are to be shipped, we request that our "per source" activity limit be raised to 250 mCi for the I-125 sources and 1.3 Curies for the Gd-153 sources.

Our check for \$120 to cover the NRC amendment processing fee is attached. We look forward to receiving this amendment. Thank you.

Sincerely,

*Donald W. Fundingsland*

Donald W. Fundingsland, President
