Attention: Mr. D. G. Wiedeman

SUBJECT: Notice of Violation
License No. 12-18966-01

Dear Mr. Wiedeman:

In accordance with your letter dated May 15, 1985 and my telephone conversation with Mr. Patterson on May 29, 1985, we are hereby responding to the Notice of Violation included with your letter.

The notice states a violation of License Condition No. 18 which limits the use and storage of our Nuclear Density Gage at 222 West Adams Street, Chicago, Illinois and temporary job sites under your jurisdiction. The noted violation is use and storage at 168 North Clinton Street, Chicago, Illinois.

When Mr. Patterson performed his inspection in early April he was put in contact with me at our job site field office where we met and he examined our records, the nuclear gage and our storage facilities. This field office was located adjacent to the Allied Asphalt Plant at Mannheim Road and the Eisenhower Expressway in Hillside. Our nuclear gage has never been used or stored at 168 North Clinton Street in Chicago, Illinois.

In accordance with the above we feel there was no violation of License Condition No. 18.

It should also be noted that the Nuclear Regulatory Commission was notified that our main office location was changed to 168 North Clinton Street, Chicago, Illinois when we applied for renewal of our License No. 12-18966-01 during April 1985.
