U.S. Nuclear Regulatory Commission  
Regional Licensing Section  
799 Roosevelt Road  
Glen Ellyn, Illinois 60137

Gentlemen:

030-17278

We wish to ammend our license, No. 21-19295-01, to include use of source material at temporary on-site locations.

The sources will be transported according to DOT regulations with radiation warning placards. Transport to the sites will be by the authorized user only, not by commercial carrier or other means. The source will be transported within the vehicle with the vehicle secured (locked) during necessary stops.

Upon arrival at the job site the instrument containing the sealed source will be housed in a secured building or room. The instrument will be operated only by the authorized user and will at all times be under his control and responsibility.

We currently anticipate the above to be our method of on-site testing. However, we would also like the option of housing the instrument on-site within a vehicle owned by us. That is, transporting the source to the site within a truck and use of the instrument at the site within the same truck.

The sources to be used are currently licensed, would not exceed four of 15 millicuries each and may be either Hewlett-Packard Model 18803-60520 Detector Cell or Shimadzu Scientific Instruments, Incorporated Detector Cell Model No. ECD-7.

Enclosed is a check for \$40.00 as the fee for this ammendment.

Yours very truly,

*Peter W. Rekshan*
