Chicago 13, Illinois

Dear Sir:

I am interested in securing your recommendations as to the size and type of incinerator needed to burn Slusher Filter Press paper.

The filter press paper is three feet wide and seven feet in length. The dry weight of each paper is 106 grams or approximately 1/4 lb. We plan on inserting the paper into the incinerator in a damp condition. Each paper weighs approximately 3/4 lb in this damp state. The paper can be cut, torn or compressed before disposal. Each filter press has 25 papers in it.

While the length of time required to burn the paper is not critical, I would suggest the unit be sized so a maximum disposal time of four hours is attained.

I would also appreciate any cost information you have and the name of your distributors in our area.

Yours very truly,

B. E. Winn
