Docket file 40-3453

Dear Mr. McMillan:

This refers to our telephone conversation on February 13, 1974 concerning the environmental review we are conducting of the proposed plant modification for the Atlas Mineral Uranium Mill at Moab, Utah. We are pleased that you are able to offer your assistance in the review and evaluation of the geological considerations contained in the Atlas Environmental Report, a copy of which is enclosed.

In particular, to the extent possible, we need your independent assessment of the geological data and information presented by the applicant in their environmental report and your determination as to whether the applicant's conclusions are valid. We would be pleased to receive any additional information on geological matters of relevance to this facility.

Because of our current tight schedule for performing the environmental evaluation for this facility, we need your comments and discussion as soon as possible. If you find that you will be unable to provide your input by the end of March, we would appreciate an estimated completion date so that we may adjust our schedule accordingly.

If we can assist you in any way please feel free to contact me at telephone 301, 973-7631.

Sincerely,

LeRoy S. Person
Environmental Project Manager
