JUN 11 1984

Gentlemen:

Please find enclosed your new Byproduct Material License No. 25-23133-01. You should carefully review the license and familiarize yourself with all of its provisions and requirements. Please note that your application and other documents submitted to us have been incorporated into your license and are, therefore, legal requirements. It is our view that the requirements of your license and applicable regulations are reasonable and necessary to protect the radiation worker and the public. The NRC expects management attention to the radiation safety program and a high standard of compliance with NRC requirements. You will be inspected to verify that all requirements have been met. Prompt and vigorous enforcement action will be taken on those licensees who fail to control their licensed program and allow significant violations to occur.

Please contact us if you have questions concerning the license or the requirements of NRC regulations. Enclosed are copies of certain NRC regulations applicable to your license and an NRC Form 3. These documents should assist you in beginning your program. You must maintain and update these documents in the future. You should contact Region IV if you change your address or place of use of licensed material, as an amendment to your license may be required. It is important that we be able to contact you by telephone and mail you certain documents pertaining to your licensed program.

We wish you every success in your program utilizing this license.

Sincerely,

Original Signed By
R. J. Everett
