Re: Renewal and Amendment of License SMB-353

Dear Mr. Wright:

During our correspondence on the above subject, the Bloomfield Plant has requested an amendment to license SMB-353 to reflect a new location for the manufacture of thoriated emission mixture and thorium metal and the renewal of our license.

It has now been determined that it will be necessary for us to resume this manufacturing activity. The equipment used at the former location, Building 10, has been decontaminated and moved from this area. The equipment, walls and floor have been smeared and surveyed with an Eberline alpha scintillation counter, Model PAC-15A, calibrated 9/77 and a Baird Atomic G.M. survey meter, Model 420, calibrated 1/77. The smears were evaluated in a scintillation counter at the W Industrial Hygiene Lab. East Pittsburgh. A copy of this report is enclosed. I am also enclosing four copies of the floor and wall layout showing the location of the smears and the dpm.

These readings indicate that the equipment and vacated area have been decontaminated to or below the levels specified in NRC's Guidelines For Decontamination of Facilities & Equipment Prior To Release For Unrestricted Use.

Four copies of the completed form, NRC-2, are enclosed. If additional information is needed, please contact the writer.

The layout showing the location of equipment at the new manufacturing area was submitted to your office on 9/15/77 by G. W. Caplis of our Works Engineering Department (Drawings A SK-9096PD and BSK-9147).

We have been informed by Mr. R. J. Hart, Manager, Oak Ridge Operations, Department of Energy (copy of his letter enclosed) that NRC would, upon request from Westinghouse, amend our license to cover the floor drains in the Lab, basement Building 7. We are requesting that our license be so amended.
