Dear Mr. Reichold

Thank you very much for all your help. We are going to dispose of all the material as I indicated. I have closed and locked the shutters on the three sources, and we are scheduled to have the sources leak tested and packaged for shipment on June 24, 1997. They will be shipped to the manufacturer for disposal after the results of the leak test, and they are cleared to move.

The following information is submitted as requested in your June 5, 1997 letter.

1. NRC Form 3154 will be submitted upon disposal of the material.
2. Three Cesium-137 sources were used at the facility. None were stored. We have had no leaking sources.
3. All leak test results which are performed during shipping will be provided with the Form 314.
4. Removal will be confirmed.
5.
  - A. The facility will not be decommissioned.
  - B. There were no radiation doses to the public.
  - C. There were no releases to sewers, incineration, radioactive spills or burials of radioactive material.

As soon as the material is shipped, I will contact you and complete the remaining paperwork.

Sincerely,

*Otto Reimann*
