MEMORANDUM FOR: Paul Guinn  
Material Licensing Branch

FROM: Earl G. Wright  
Material Certification and Procedures Branch

SUBJECT: BOEING VERTAL APPLICATION, CONTROL NO. 05838

This refers to Boeing Vertol letter dated November 7, 1980 which requested license for receipt, use and distribution of devices containing tritium light sources.

The sources are manufactured by Saunders Roe in accordance with British Standards. The sources are installed in holders by the Dowty Electronic Co. (Part No. 1260Z184). These parts are to be imported by Boeing Vertol and installed on helicopter toggle switches. The helicopters containing these sources will be distributed only to the British Royal Air Force.

Based on our review of this application and in consideration of the fact that this type light source has been previously licensed by both NRC and the Agreement States, we believe that the application is acceptable for specific licensing of Boeing Vertol to allow possession, use and distribution of these sources to the Royal Air Force.
