Glen Ellyn, IL 60137

Attn: Patricia J. Whiston
Materials Licensing Section

Dear Patricia:

In August, 1986 Mosinee Paper Corporation was issued an NRC license number 48-24767-01 to operate an Ohmart scale and six Ohmart point level detectors on our digesters. It has recently been determined that the sources on the level detectors is too small for our digesters.

This letter is a request to amend our license as it pertains to the six point source level detectors. The sources in the new equipment will still be Cesium-137. The source holders will still be Ohmart model SHLG-1. The current sources are 600 millicuries each. We need our license to be amended to allow six sources not to exceed 1500 millicuries each. All other portions of the license will remain as they currently are.

I have enclosed a check for \$60.00 for the amendment application fee. We are planning on making the source change during a mill shutdown at Labor Day of this year. Anything that you can do to expedite the amendment approval would be greatly appreciated. Please call me if you have any questions.

Sincerely,

William E. Amsrud
