Subject: Boilerplate for 50.54(f) info request

Mort:

Attached is the latest GL to be issued by NRC involving an info request pursuant to 50.54(f). See p.7 for correct format for such issuances. That boilerplate was developed in the context of NRR response to Regulatory Impact Survey issues raised by licensees regarding use of GLs to impose new regulatory requirements. This has been regarded "the norm" consistent with Commission policy for several years now. The proposed 50.54(f) letter on design bases adequacy and availability does not measure up well to this standard as regards specific language.
