Docket Nos. 50-327  
50-328

SEQUOYAH NUCLEAR PLANT (SQN) - UNITS 1 AND 2 - NRC INSPECTION REPORT  
NOS. 50-327/87-52 AND 50-328/87-52, SQN ESSENTIAL RAW COOLING WATER (ERCW)  
SYSTEM AS-BUILT VERIFICATION INSPECTION - REVISED VIOLATION RESPONSE

Stewart D. Ebnetter's letter to S. A. White dated September 25, 1987,  
transmitted Inspection Report 87-52. TVA responded to this inspection  
report with a letter from R. L. Gridley to NRC dated November 10, 1987.

In TVA's response to violation 87-52-01, we committed to the following:  
". . . an instrument engineering requirements specification will be issued  
requiring valves be tagged and identified on engineering output drawings.  
Implementation of this specification is expected by March 15, 1988."

The preparation and approval of an engineering specification have required  
significant coordination among the Division of Nuclear Engineering,  
Division of Nuclear Construction, and the operators to resolve conflicts  
and produce a procedure that can be effectively and efficiently  
implemented by all affected organizations. The instrument engineering  
requirements specification was approved and issued on March 2, 1988. Site  
procedures are being revised to fully implement the specification, and  
full implementation of the above commitment will be in effect by May 29,  
1988.

The commitment made in this submittal is stated on the enclosure.

Very truly yours,

TENNESSEE VALLEY AUTHORITY

  
R. Gridley, Director  
Nuclear Licensing and  
Regulatory Affairs

ENCLOSURE

Revised Commitments for SQN

1. The instrument engineering requirements specification was approved and issued on March 2, 1988. Because of this delay in issuing the instrument engineering requirements specification and the large number of site procedures still requiring revision to fully implement the specification, full implementation of the above commitment is not expected until May 29, 1988.
