FROM: Gary L. Phipps

SUBJECT: FLORIDA POWER & LIGHT MANAGER'S PUNITIVE ACTION FOR  
SAFETY CONCERNS.

**PURPOSE OF FILING COMPLAINT AT THIS TIME:** To put on record this act of discrimination, and to prevent future acts of discrimination because it is often difficult to show with direct evidence that an employer acted with an improper and biased motivation. So often allegedly unbiased decisions are merely some-pretext for discrimination. I also want to state at this time for the record that I do not seek monetary gain, punishment or revenge for the regrettable action of a few. Note: Under identity protection I would prefer my name not become public and I understand that my name will be revealed at the work location.

On October 3, 1994, I started writing a letter to the NRC in response to the news that the simulator Personnel were to be excluded from working the unit #1 refueling outage, but instead of mailing the letter I showed it to Rick Curtis (President of the Union Local) after the union meeting, he said he would look into it.

Rick intern, talked to Chris Burton (Plant General Manager) about simulator personnel working the plant outage based on the fact that temporary workers were to be on sight and based on the memorandum letter concerning simulator personnel. It was agreed upon that simulator

personal would work the same hours as the I&C Personnel.

**Note:** Thus far simulator Personnel were not allowed to work any overtime unless it was to make emergency repairs to get the simulator running again. That was the policy. On October 26, 1994 I had a conversation with Jim Lewis (Simulator Co-worker) at shift change and he told me that they came up with a decision to work us in the simulator. Jim Lewis said that Jim Martin (Head Supervisor of the Simulator) said the I&C department wanted to only offer you (Jim Lewis) the overtime in the plant. (Jim Martin also said) It would be unfair if they would not offer it to both of you they would not get either of you.

The Plant was going to take Jim and work him in the Plant during the outage and have me work in the simulator. The problem is that Jim is senior to me and he would have a choice of where he wanted to work in that situation. Jim Lewis also has about eight years on the simulator and I only have Two. That is another reason Jim Martin did not like that idea. The part I don't think was right is I am more qualified in nuclear I&C work than Jim Lewis. I worked in Nuclear Power for 15 years before working in the simulator shop, Jim had worked in fossil Plants before transferring to the nuclear division and had only a few months at St. Lucie I&C shop before going to the simulator. Jim Lewis has had very limited training on nuclear systems other then red badge training and general entry. Don't misunderstand me Jim is a very smart and knowledgeable I&C technician I am just making some comparison. Enclosed is a copy of my qualification in the nuclear field.

As I brought this to managements attention here are some excuses given to me. Reason for singling me out.

1. Members of management said we didn't need the extra labor that we had enough with temporary employees. (They are to ask all qualified permanent employees for overtime first before temporary employees are given overtime.)
2. You're not qualified on our systems. I asked are temporary employees? Are utility workers that are up relieved?
3. Then it was we wouldn't work enough hours to make it worth while. Management made some changes after I talked to Rick Curtis and was going to let one of us simulator personnel go to work the outage but the plant didn't want me. They said Jim was qualified because he had worked the outages before.  
**Note:** I have worked two outages before and installed PCMS on loop power supplies that were safety related. I worked pressurizer pressure loop calibrations, NIS cable installation. feedwater transmitter repairs and other jobs I just can't recall at this time. I guess that work didn't count. But I am sure they took credit for it to start up the units with.
4. You don't understand how we work around here at St. Lucie Plant, your not at Turkey Point anymore. I though I worked for Florida Power and Light. And I have read some of the administrative procedure such as ADM 8.02 St. Lucie Plant conduct of maintenance and Turkey

Points Plant conduct of maintenance O- ADM-701, I find they are very similar. I also find that some of the maintenance supervisors take liberties in their interpretation of these procedures which is where I guess I have had some conflicts. As you can see these excuses are just excuses.

**Let me bring up some of my actions that I feel have prejudiced management in my direction**

**Back ground event:**

1. In June 1991 while working on 4A emergency Diesel at Turkey Point I discovered and reported to speak out a discrepant condition with the swagelock tubing fitting installation. At first I was chastised and thought that I was trying to delay unit start-up. Also it stated that I did not know what I was talking about, I informed speak-out if they could not handle it I would go to NRC. I didn't make many friends the truth was many other workers reported to supervision about the swagelock problem, it was blown off.

When a Swagelock company Rep came and looked at the tubing he said his company would not honor the installation and a full inspection and repair would be required. It took two weeks for the diesel generator vendor to make the repairs and absorb the cost of the fittings and it was found 20% of the fittings on one of the diesels were replaced and 40% on the other were replaced. At the end I was given a letter of commendation and a cross pen. News does travel between nuclear Plants. On September 22 1992 I bid a job at St. Lucie Plant and then on October 8, 1992 I rebid it because of some problem the plant had with the job posting. I thought I might have trouble so I sent my second bid by certified mail and sent a second copy of my bid to the union by certified mail. The St Lucie Plant signed for my bid but lost it. I sent a letter to Mr. Goldberg and confronted the union. Finally they excepted the bid and I transferred up to the Lucie Plant, I tell you this because I feel I had to face some opposition in the local management. Loosing a signed for bid. I have to question when things go beyond chance and when are they directed.

**Current Events:**

2. During the Feb 94 unit 2 one of the problems I had with supervision where we got into a conflict. I was given RCS pressure transmitter loop to calibrate. Jose Hernandez was assigned to help me. He was from a fossil plant, ex-navy, utility worker up relieving as I&C journeyman. He was good but had no training on St. Lucie's reactor protection circuits and I didn't either. The operators for the first set were helpful and took the first channel out of service. We had problems with the test pump but after rebuilding the pump the problems were solved and we finished the loop. Note: There was pressure for us to do it fast and when we were done the supervisors knew we worked hard and thanked us. The next day a new set of operators came on and they didn't want to take the channel out of service but they did. The issue was brought up about training by the operators. We removed the swagelock tubing fittings but they were overtightened and galled when we took them off. After calibration we reported the problems to our supervisor James Kawa and he wanted us to put the transmitter bystables back in service without connecting the tubing or

valving it in and go to the next transmitter. I said the loop can't perform it's function. And that would violate the system configuration. (Note: configuration management manual is a nuclear division procedure obtained at Juno document control) I believe the reactor was vented and I know that nobody would have known the difference but if something happened and we didn't get back to that transmitter repair, we would have a problem. Also the procedure didn't have any provision for this, it stated to work on one channel at a time from cold to 100% power (See Attached Copy). When I mentioned system configuration and questioned how it was to be maintained with this procedures. I asked the supervisor to check with operations I felt they too would feel the loop must be functioning before we put it back in service. I said if the NPS said it was ok that I would have no problem putting that loop back in service and go on to the next loop. The perception at the time I was slowing things down and did not want to follow supervision directions.

3. Toward the end of the outage I was assigned to replace the tubing of the feedwater transmitters the PWO said I needed a clearance. The unit status was 350 °Rx going to 547° by morning. I wanted a specific clearance for this job to close the root valves, he wanted to give me a generic clearance I argued that the plant would be coming up in the morning and operations would be pressurizing the secondary feedwater lines to start cleaning up chemistry. He said I didn't need a clearance to close the valves and I said I can close the local isolation valves to the transmitter but not root valves. He finally agreed to get a clearance but I know he didn't like it. You can ask Mr. Hernandez he was assigned to work with me on that job too.

4. On July 11, 1994, I reported to speakout about an indicator problem I had with the new versatile indicators that are replacing our old sigma indicators. On August 2, 1994 Speak out reported that they found no problem. Well I called John Luchka the speakout man that was handling the concern #NSS-PSL-94-093. I invited him to come to the simulator on September 5, 1994 Monday Morning at 0530. The simulator was free and nobody was scheduled to be around. I picked out 11 indicators and typed up a sheet so he could write the as found values down and then I had a column set up for actual values. I set up the simulator Mr. Luchka came in wrote down the values and then he quickly became aware of what I was taking about. He missed 7 or 8 of the 11. I am sure he went back to the person that he talked to and explained what the problem was and I feel someone figured out who was the one that complained. It also must be noted that one of the operators stopped by and saw Mr. Luchka with me. A week or so later Jim Lewis is informed we won't be working the outage. The problem has compounded to be more than my original description because of hidden failures see attached star report that I turned in for a detailed explanation of the problem.

I feel the start of the Point of discrimination was October 26, 1994 that is when the final decision was made not to work me in the plant. I know I have taken a while to get this letter in but I tried to work the problems out with management thru the union. We came close. (See list of what I turned into management I was working toward).

On February 13, 1995 I went to a meeting and the results of Chuck Scott's investigation confirmed disparate treatment, see attached letter. I do not agree with all the conclusion of the investigation. One of the things Mr. Scott never talked to my co-worker Jose Hernandez or other workers of that

outage on that shift. Mr. Scott didn't review the procedure involved or the PWO'S I worked that outage. He was able to get this conclusion just from talking to a couple of the I&C department supervisors. They want all their rights even though that's what lead them to this problem and I only wanted them to yield some of them for a short time in order to let things settle down, and get back on a working relationship. They want to say it is just personality, but I disagree and during your investigation and interviews with my co-workers I urge you to give them confidence that your looking for the truth and wanting to insure proper corrective action if needed. The fear factor must be reduced. No one wants to lose their job or have discrimination brought against them. They have seen what can happen.

The final straw came on February 14, 1995, when two things happen.

1. In a conversation with my supervisor Don Houldsworth about 5:45am I felt threatened, it went like this:

This morning Don Houldsworth asked about how the meeting went and what the out come was. I replied it looks like we will be working the outages when their are snows and the whole shop works, or when temporary employees but they are still doing to work out the details on that. Don got mad and said if you have screwed up what I got going here our relationship is going to change for the worst. He also said this was all a bunch of shit I am stirring up. I got the best job and I am screwing it up. I said that's not true and I think we need to get a meeting together and go through this. I also said you don't want to say this bunch of shit. He said to me do you want me to put this in writhing? I response by saying you don't want to do that.

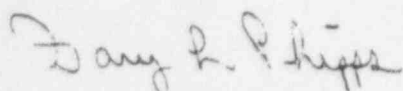

2. That Morning I wrote this up and went over to the I&C shop to talk to union representative Joe Sorentino. I wanted to tell him about the conversation I had with my boss and give him a written copy. He informed me that during the up coming snow outage that the simulator boys weren't to be included because we were not qualified. Joe asked how could they have worked this weekend? Managements reply was they were working under close direct supervision. (This was a special call out to go on top of the pressurizer at 100% Rx to install ultra sonic sensors so it could be determined where and what was leaking. The plan was to determined what the plant needed to fix the unit before shutting it down the next weekend. I worked a double shift and so did Jim Lewis. Note: It was 140° on top of the pressurizer and the I&C shop needed us to fill the crews or they would have had to force workers into do the job.) He felt that was bullshit and so do I. The company has had two years to get me qualified and I have been after them since July of 1994 in a very serious way. They can bring temporary employees in the plant to train them in a couple of days and then they are off and working. They can train employees that transferred into the shop when I did and after I did. I forced them to look at what they have been saying about me and my qualifications and then they realized the gaps in their program.

I called Ron Fields at PH#( 1-301-415-5965) NRC Representative the next morning and told him I had to talk to him about a discrimination complaint, he already had an appointment set up to see me on another unrelated issue. We met February 20, 1995 and I gave him a brief explanation of what's going on. Ron Feilds contacted the Atlanta NRC office to turn over the investigation. Oscar DeMiranda from the Atlanta office of investigations called me March 2, 1995

and in our conversation he said he would mail me a letter with information to file my complaint. I was charged to compile my complaint in writing and mail it back to him and a copy sent to the department of labor.

My life has been very busy going to school 3/4 time and having mid term college exams, out of town wedding, car repairs, illness just to mention a few things. These are a few of the reasons I have been so slow in returning this information. I hope this gives you a clear picture of what's going on. Please feel free to call me anytime. If I am not home please leave a message and I will get back to you as soon as possible. I thank you very much.

Sincerely,

A handwritten signature in cursive script that reads "Gary L. Phipps".

Gary L. Phipps
