

MAR 25 1971

Docket No. 50-29

Yankee Atomic Electric Company  
ATTN: L. E. Minnick, Vice President  
441 Stuart Street  
Boston, Massachusetts 02116

Gentlemen:

In 1970, amendments to the Commission's regulations in 10 CFR 50 with regard to quality assurance requirements for the construction and operation of nuclear power plants became effective. Appendix B to 10 CFR 50 sets forth criteria for quality assurance programs.

In order that we may evaluate whether the quality assurance program that is used to govern activities such as operation, maintenance, repair, refueling, and plant modifications, Yankee-Rowe Nuclear Plant meets the criteria of Appendix B, please submit a description of your quality assurance program within 90 days. The description should include the items set forth in Section 50.34(b)(6)(ii) of 10 CFR 50 and should be filed as a supplement to your Final Safety Analysis Report.

Three signed and notarized copies and twenty-two additional copies of your submittal should be provided. Documents already on file with us may be incorporated by specific reference, if you desire.

Sincerely,

Original Signed  
Peter A. Morris

Peter A. Morris, Director  
Division of Reactor Licensing
