License No. 21-16793-01G
License No. 21-16793-02

Gentlemen:

This refers to the inspection conducted by Messrs. B. B. Dicey and D. A. Sreniawski of this office on October 28, 1978, of activities at facilities formerly occupied by Radioassay Systems, Inc. authorized by NRC Byproduct Material Licenses No. 21-16793-01G and No. 21-16793-02 and to the discussion of our findings with you at the conclusion of the inspection.

The inspection was an examination of activities conducted under your licenses as they relate to radiation safety and to compliance with the Commission's rules and regulations, with the conditions of your licenses, and the terms of an order dated July 13, 1978 suspending both licenses. The inspection was conducted at your request to verify that all licensed material previously possessed by you under these licenses had been disposed of in an authorized manner and that there was no residual contamination of your facilities which would preclude their release for unrestricted use and termination of your licenses. The inspection consisted of an examination of records, observations, independent measurements, and interviews with personnel.

No items of noncompliance with NRC requirements were identified during the course of this inspection.

We have received a Certificate of Disposition of Materials (Form NRC-314) dated October 10, 1978, and signed by Mr. A. A. Nitzsche. This form requests that Licenses No. 21-16793-01G and No. 21-16793-02 be terminated. Based on the results of this special inspection, we have no objection to this request. We have advised NRC Headquarters of the above.
