General Comment

The inherent safety and low inventory of small advanced reactors demonstrates generically that the health and safety of the public and the environment are protected. The work the Nuclear Regulatory Commission is undertaking to prepare a generic EIS for advanced small reactors is in line with the vision statement of the NRC to be a trusted, independent, transparent, and effective nuclear regulator. Advanced reactor technology is critical to future climate change mitigation strategies and the NRC is doing the right thing streamlining the review and approval process for future advanced reactor sites.
