General Comment

I believe the extension is acceptable for the State of Wisconsin as a reliable power producer. The PBNP has proven over the last 50 years to be a safe, clean and reliable power source for the State and a employer of good paying jobs that has a positive economic impact to the surrounding counties. The employer Nextera Energy has been a positive contributor to the area in both support of businesses and contributions to the area.

The Independent Spent Fuel Storage Installation has met all regulatory requirements and has proven to be safe to the environment and minimal waste after 50 years of operation. It was the government and politics that has prevented the utility from moving their spent fuel to a permanent storage facility, which the government had planned for before utilities decided to build the nuclear plants.

As long as Nextera Energy at PBNP continues to operate the plant safely and is meeting federal regulations to continue it's safe operation as determined by the Nuclear Regulatory Commission, the plant should be permitted to operate and provide carbon free energy to the State of Wisconsin.
