Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 2:58:28 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Carolyn Villanova

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Diane Boyd

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Joseph Shulman

Date: Saturday, June 05, 2021 2:42:47 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Coleen Gowans

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 2:36:55 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Caitilin Kane

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 2:30:29 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Mark Swanson

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 2:25:47 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Donna Hreha

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 2:20:14 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 2:11:42 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Jeffery Garcia

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 2:06:51 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
William Rice

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Linda Musmeci Kimball

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Loretta Kerns

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Jean Wiant

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 1:50:22 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
William Welkowitz

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 1:41:47 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Beverly Janowitz-Price

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 1:38:12 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 1:33:29 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Ruth Lovinsohn

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 1:25:18 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Chris Monroe

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Edward Fisher

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Paul Daly

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Beverly Conway

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 1:08:55 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Warren M. Gold

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 1:05:29 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Janet Handford

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 1:02:28 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:58:44 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Robert Reed

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Thom Lufkin

It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Barbara Buck

Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Jeanine Mindrum

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:47:36 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Michael Haseltine

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:46:01 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Bradford Christman

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:42:38 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Merrill Cole

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:40:41 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Timothy Shaw

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:36:06 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Edna Mullen

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Sandra Rust

It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Richard Klett

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
mark scibilia-carver

Date: Saturday, June 05, 2021 12:27:59 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Sharon Paltin

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:25:43 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Jim Vogas

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:23:08 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Donald Clark

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:20:53 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Linda Wasserman

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:19:18 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:16:33 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Ann Herren

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Molly Swabb

It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Sarah apfel

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Mark Hirschfield

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:11:30 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
John Feeney

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:09:52 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Thomas Hernandez

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:08:16 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Ian Shelley

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:06:35 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Steven Lowenthal

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:05:20 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Janet Robinson

Subject: [External_Sender] Docket ID NRC-2021-0099: Exelon license transfer application
Date: Saturday, June 05, 2021 12:03:42 PM

Dear NRC Nuclear Regulatory Commission,

Dear Chairman Hanson and Commissioners Baron, Caputo, and Wright,

I urge you to reject Exelon's petition to transfer all of its nuclear reactor licenses to a new, completely separate corporation (currently called SpinCo). The Commission must reject this corporate spin-off scheme, which is unprecedented in size, scope, and complexity. It places worker and public health and safety at immense risk from the transfer of aging, uneconomical reactors, thousands of tons of radioactive waste, and over \$14 billion in consumer-funded decommissioning funds to a company that does not even exist yet.

In order to possess a reactor operating license, a company must demonstrate that it is financially qualified and can provide assurance of sufficient funds to fully decommission the reactor. Exelon's proposed "SpinCo" meets neither criteria, and its license transfer application provides no evidence to the contrary.

Exelon states publicly and in its application that many of its reactors are not able to generate enough revenue to pay their operating and maintenance costs. Several others are financially dependent on temporary consumer subsidies from state governments. SpinCo will have no other sources of revenue except for electricity sales and subsidies, and cannot guarantee it will have sufficient funds to operate and maintain all of its reactors safely.

Neither can SpinCo provide assurance of decommissioning funding. In 2019, Callan Institute concluded that Exelon's decommissioning funds were between \$1.5 billion and \$7.4 billion short of the amounts needed for decommissioning. The company will have no other sources of decommissioning funding than the decommissioning trust funds. Because the reactors themselves are unprofitable and dependent on temporary, out-of-market subsidies, SpinCo will not be able to make up for decommissioning fund shortfalls and cost overruns.

What is more, the application does not provide the state in which SpinCo will be incorporated, nor the names of its executives and officers, as it has not even been incorporated. In effect, Exelon is asking NRC to violate its own statutory and regulatory requirements (per 10 CFR 50.80 and 50.33), and allow 28 reactor licenses and billions of dollars in decommissioning funds to be transferred to an unknown company.

Exelon is proposing this spin-off because it no longer sees a future in nuclear power, which is increasingly risky and uneconomical. So Exelon has decided to get rid of its nuclear power plants because no other company sees a future in them either. But the Atomic Energy Act and NRC's licensing requirements are intended to prevent exactly what Exelon is proposing. Putting nuclear reactors in the hands of financially unqualified companies that could put the public's health and safety at risk. NRC must dismiss Exelon's application: it is incomplete, SpinCo is not financially qualified, and cannot provide decommissioning funding assurance.

Sincerely,
Rosalie McMenamin
